

18 The Green Man
c. 0001800 CE
Unprovenanced

This memory archive in the form of the 'Green Man', contains rare data that depicts a species that is now extinct. Whether this object was a relic in a religious sect, or served some other purpose is unknown. At one time it was believed to embody magical powers from rare surviving scriptures. Scan the QR code to check its digital content to know more about this object.

19 Image of an Electric sheep
c. late 21st century
Mongolia

This is an image of an electric sheep kept as a pet by humans. After World War Terminus (WWT), many animals became extinct. As a result, owning a scarce animal became a symbol of wealth. To satisfy demand for animal pets from those humans with strong vanity, electronic animals were manufactured to look real. These were less expensive and easier to take care of. The repair on the animal's leg, shows the value of the animal to the human owner, rather than discarding a broken animal, it is cared for.

20 Missing exhibit: Ansible
c. 0001981 CE
Rendlesham Forest, Suffolk

An ansible is a superluminal communication device. A time travelling consignment of ten exhibits was sent from the Illegal Museum of Beyond to the exhibition in 1981. However, they were lost during time transfer, and despite extensive searching, have still not yet been recovered. Time travel is notoriously imprecise.

21 Prosthetic communication device
c. 0002300-0002400 CE
South East England

This archaeological object, recovered from ancient human burial tombs, is the remains of bioprosthesis extensions of the human body. Bioprosthesis devices eliminated the need for separate technological devices, such as mobile phones. This meant that there was no longer a risk of forgetting your phone, or having it stolen. Scan the QR code and check the film to know more.
